Ultrasonic Point Level Switches

Ultrasonic point level switches

are a cost-effective solution for your applications. Installation requires mounting the sensor (threaded or flanged) to the vessel, connecting the power and control wires, and applying power. There is no additional set-up or calibration required. Since it is an electronic instrument with no moving parts, preventive maintenance is limited to an annual visual inspection. The only recommended spare part is the “board” at a quantity of one board for every 10 units. A technician with basic electrical skills (wiring) can service the instrument.

Why use an ultrasonic switch over other level technologies? Depending upon your application, there may be three or four technologies equally suited for your application; however, only one will be the best choice when considering its features and benefits.

Features & Benefits

Cost

- In addition to the price of the instrument, you must consider the cost of installation, set-up and calibration.

Maintenance

- You need to factor in the frequency of preventative maintenance. Also, consider the cost of keeping key “spare parts” on the shelf.

Skill

- What “skill” level is required of your maintenance personnel to service the instrument.

701 Single Point

711 Single Point

722 Dual Point

Ultrasonic switches are simple to apply and use. There are only a few limitations to their use:

- The media must be liquid
- Process temperature between -40 and 250°F (-40 to 121°C)
- The media must have less than 5% suspended solids
- No aeration in fluids with a viscosity of 100cP (30W motor oil) or greater

The following chart will assist you in selecting the right product for your application.

Single-Point Sensing	Line Power		Loop Power
Integral Mount Electronics	701 Pages 4-5	711 Pages 6-7	701 Pages 4-5
Integral Mount Electronics with Sensor Monitor (Self-Test)	721 Pages 8-9		721 Pages 8-9
Remote Mount Electronics	701 Pages 4-5	711 Pages 6-7	701 Pages 4-5
Remote Mount Electronics with Sensor Monitor (Self-Test)	721 Pages 8-9		721 Pages 8-9
Dual-Point Sensing	Line Power		Loop Power
Alarm or Pump Control	712 Pages 10-11		N/A
Alarm or Pump Control with Sensor Monitor (Self-Test)	722 Pages 12-13		N/A

Principle

An ultrasonic switch is a device that uses inaudible high-frequency sound (ultrasound) to detect the presence or absence of a liquid at a designated point. The device consists of an electronic control unit and a sensor.

Ultrasonic level switches use the properties of sound transmission in vapor and liquids to detect liquid level. When sound travels in air, it loses a great deal of signal strength. When traveling in liquid, sound retains almost all of its signal strength.

To detect liquid level, we must determine if there is a liquid or gas (air) in the gap. Since liquids have a higher density than gasses, it is easier to transmit sound through them. One side of the sensor gap transmits sound, the other side detects it. When liquid is present, a high amount of sound is received at the detection side. When gas (air) is present, a small amount of sound is received. The electronics detect this difference and switch a relay accordingly.

Ultrasonic switch sensors contain two piezoelectric crystals, one transmits sound and one receives sound. Each crystal is mounted on one side of a gap in the metal sensor. The transmit crystal generates high frequency sound (1MHz to 3 MHz) that is directed across the gap to the receiver crystal. The receiver crystal converts the sound energy received into an electric signal, which is processed by the electronics to determine if the gap has liquid or air in it.

The drawing below shows the basic construction of an ultrasonic level switch sensor. An electrical signal is sent to the “transmit” crystal, which causes it to vibrate and produce high frequency sound. The “receive” crystal converts the high frequency sound that strikes it to another electrical signal, which is sent back to the electronics for processing. The sound energy that makes it across the sensor gap is very weak in air, and becomes very strong in liquid.

Application Conditions

Ultrasonic level switches can be used in a wide variety of applications without any calibration or setup. However, there are limitations to the types of process they will work in. The factors below must be taken into consideration before selecting an ultrasonic level switch for your application.

- Liquids only - the process media must be a liquid. The ultrasonic level switch cannot detect the difference between two gases or a gas and a solid. The even density of a liquid is required for proper detection.
- Clean liquids only - a liquid that has too high a percentage of solids will not transmit sound well enough to allow detection. Typically 5% suspended solids are the maximum amount allowed.
- The liquid must flow - an application where the liquid cannot drain out of the sensor gap will cause false alarms. If a liquid is too viscous to flow out of a 3/4" gap then the unit will not operate properly. Sometimes this can be solved by different mounting, but some liquids are just too viscous.
- No (or few) bubbles - especially in fluids with a viscosity higher than 100cP (30W motor oil). Large bubbles in thick fluids will block the sound signal from crossing the gap. Low viscosity fluids can have a fairly large amounts of bubbles as they tend to be very small (Alka-Seltzer in water).

If these guidelines are properly observed, the ultrasonic level switches will provide trouble-free operation without any calibration or periodic adjustment.

The 701 tip-sensitive ultrasonic switch is a single-point device designed for economical detection of clean liquids. There are no moving parts and no calibration. The 701 is available either integral or remote mounted. An optional time delay can be used to eliminate false alarms due to turbulence in the process. An optional field selectable fail-safe switch is also available. The standard unit is set to High-level Failsafe (HLFS)

Features

- No calibration required
- 10A DPDT relay output
- FM Approved or CSA Certified for hazardous locations
- Line and loop powered versions
- Rostechnadzor (RTN) standard certificate (available upon request)

701 Single Point

Product Specifications			
Input Power		Maximum Current Draw (Line Power)	
Line	120 VAC, 50/60 Hz	24 VDC	100 mA
	240 VAC, 50/60 Hz	120 VAC	35 mA
	24 VDC	240 VAC	18 mA
Loop	11-36 VDC Intrinsically Safe		
Fuses	Field replaceable (line power only)	Response Time	
		On	0 second
		Off	1 second
Output Type		Enclosure Environmental Rating

	10A DPDT, 30 VDC		
	DC rating shown for resistive loads		
Loop	8mA (dry),	Conduit Connection	
	16 mA (Wet)-Standard	3/4" NPT	
Loop Resistance	765 ohms maximum @ 24 VDC	Maximum Remote Distance from Sensor	50 feet (15.2 meters)
Repeatability	0.078" (2mm)	Ambient Temperature Range	-40 to 160°F (-40 to 71°C)
Failsafe	HLFS-Standard; field selectable is optional	Process Temperature Range	-40 to 250°F (-40 to 121°C)
		Maximum Process Pressure	2000 psig (138 bar)
		Weight*	2.5 lbs. (1.2 kg)

* See page 23 for sensor weights.

Model Number System

701-K1-U-P7-C-FS

The 701 is comprised of two parts. The first is the electronics and housing; the second is the sensor. Select the electronics and housings on this page and refer to page 18 for the sensor model number. The housing dimensions can be seen on pages 14 & 15. When ordering a remote housing, order remote cable part number 300-XX-S (XX = length in feet). Orders must have complete model numbers, i.e. each component must have a designator.

* Match sensor approvals to electronics approvals to maintain the agency listing integrity.

OD	On delay time (6, 7, 8 power only) (specify time from chart on page 16)
OF	Off delay timer (6, 7, 8 power only) (specify time from chart on page 16)
PK	Pipe mounting kit, BK accessory required (R housing only) (see page 17)
PP	Fiber tag with customer specified tag information
PY	Powder coat epoxy coating applied to housing exterior
RG	Gold-contact relay (6, 7, 8 power only)
RR	SS nameplate wired to the unit with customer specified tag information
TT	SS nameplate permanently affixed to housing with customer specified tag information
VV	Fungicidal varnish applied to housing exterior
YY	Epoxy coating applied to housing exterior (200 hours - salt spray)

Agency Approval

Agency	Safety Method	Approval	Model(s)
FM	Explosion Proof	Class I, Groups C, D; Class II, Groups E, F, G; Class III, Division 1	701xx-U-Px-FM
	Intrinsically Safe	Class I, Groups C, D; Class II, Groups E, F, G; Class III, Division 1	701K4-U-P9-FI
CSA	Explosion Proof	Class I, Groups C, D; Class II, Groups E, F, G; Class III, Division 1	701xx-U-Px-CS
	Intrinsically Safe	Class I, Groups C, D; Class II, Groups E, F, G; Class III, Division 1	701K4-U-P9-AI

The 711 ultrasonic switch is a versatile single-point device designed for the detection of clean liquids. The 711 is available with a variety of sensor types to meet most process conditions. It is available integral or remote mounted and comes standard with field-selectable failsafe.

Features

- No calibration required
- Can be used with notch, epoxy and viscous type sensors
- FM Approved and CSA Certified, for hazardous locations
- Field-selectable failsafe
- Rostechnadzor (RTN) standard certificate (available upon request)

CSA	Explosion Proof	Class I, Groups C, D Class II, Groups E, F, G; Class III, Division 1	711x1-N-Px-CS

The 721 ultrasonic switch is an advanced single-point device designed to meet your needs for overfill protection. In addition to the features of the 711, the 721 includes a "Sensor Monitor." This circuit continuously tests the functionality of the electronics and sensor. The "Sensor Monitor Relay" de-energizes if a fault is detected. The 721 is available with a variety of sensor types to meet most process conditions. It is available integral or remote mounted and comes standard with field-selectable failsafe.

Features

- No calibration required
- Continuous self-test (sensor monitor) verifies operation
- FM or CSA Certified for hazardous locations
- Field-selectable failsafe
- On/Off time delay is standard
- Rostechnadzor (RTN) standard certificate (available upon request)

The **712 ultrasonic switch** is a versatile dual-point designed for the detection of clean liquids. The dual-output can be used as independent alarm points or used in tandem to provide pump control. It is available integral or remote mounted and comes standard with field-selectable failsafe.

Features

- No calibration required
- Optional pump control logic available
- FM and CSA Certified for hazardous locations
- Field-selectable failsafe

The 722 ultrasonic switch is an advanced dual-point device designed to meet your needs for sump/pump control. In addition to the features of the 712, the 722 includes a "Sensor Monitor." This circuit continuously tests the functionality of the electronics and sensor (both gaps). The "Sensor Monitor Relay" de-energizes if a fault is detected. It is available integral or remote mounted and comes standard with field-selectable failsafe and time delay.

Features

- No calibration required
- Continuous self-test (sensor monitor) verifies operation of the unit
- FM and CSA Certified for hazardous locations
- Field-selectable failsafe
- On/Off time delay is standard
- Rostechnadzor (RTN) standard certificate (available upon request)

722 Dual Point

Two point ultrasonic level switches can be supplied with an on-board DPDT relay for pump control. The relay is rated 5 amp, 250 VAC; 5 amp, 30 VDC (resistive) and it can be field wet to pump up (left diagram) or pump down (right diagram).

Adding the pump logic (PL) accessory to the end of a model number changes level indication relays to SPDT and changes current requirements according to the table shown:

Supply Voltage	Maximum Current Draw
24 VDC	350 mA
120 VAC	120 mA
240 VAC	50 mA

Time Delay

When using time delay accessory OD or OF, choose a standard time delay from the chart below. Include the time delay after the model number.

For example: 701K1-U-P6-C-OD
OD = 60 seconds.

Time Delay in Seconds (choose one)		
1	35	100
5	50	120
15	60	150
25	70	190

Approximate Weights*

Actual shipping weights may vary from charted values because of product material, configurations and packaging requirements. For remote electrical housing add 2 lbs. (1kg) to total weight.

Ultrasonic Series	Weight (lbs.)	(kgs)	Additional Weights
701, 711	2.5	1.2	---
721	3	1.4	---
712, 722	7	3.2	10.5 lbs. (4.8 kg) for cast iron housing

*See page 23 for sensor weights.

Remote electronic housings are supplied for line mounting as a standard. Optional brackets are available for flat surface or pipe mounting.

The basic BK bracket can be adapted for mounting onto 1-1/2" to 2" pipe or stanchion by adding designator PK after BK.

For the basic flat surface mounting bracket, add designator BK to the end of any model number from the controls section in the front of this catalog. Linear = mm/in.
